The American Academy of Pediatrics is an organization of 66,000 primary care pediatricians, pediatric medical subspecialists and pediatric surgical specialists dedicated to the health, safety and well-being of infants, children, adolescents and young adults. The AAP is the largest pediatric publisher in the world, with a diverse list of resources that includes essential clinical and practice management titles and award-winning books for parents.

Realizing that I will more than likely be working in rural care once I am done, I went ahead and bought this book to get some clarity on perinatal care. Glad I did! This book is published by the American Academy of Pediatrics and American College of Gynecology. It clearly spells out the levels of care and the provider types, helpful to a DNP student with an interest in reproductive health. It discusses preconception and antepartum care, and contains information from routine care to high risk infant care, perinatal infections to risk stratification. A must read when considering that FNP's will be providing routine care in rural settings. No pictures, and not many tables.

I love books and am always buying them. As an OB nurse did not find this one easy to read or that helpful. It was recommended by an instructor of an AWHONN course I took but would not recommend it. I have a couple of AWHONN books and have found them to be easier to read and really well written. Got a lot from them.

Glad to be able to acquired the older guidelines that I needed for reference purposes

This is the exact book I was needing. I use it for my work. It will help me with my Policies & Procedures.

She really enjoy the book
