Knowledge is power! - But only if we are able to use our knowledge. Otherwise it's worthless.

Usually, at school, most children learn a lot of things by heart and don't learn how to learn. This is the purpose of this book: learn how to learn more, in less time. "The entire quality of life will be determined by your ability to learn, to think, to make your mind perform." You will discover in this book that the capacity to process new information is not depending on your IQ (or any other hereditary factor, gender or age). If you learn how to learn, your entire life can change. Knowledge and power are not restricted to a few elites or particular "high IQ"

specimen. You too can access to any knowledge you need, in a record time. All you need is to learn how to learn fast, and more important, how to acquire profitable knowledge, rather than cram a vast mass of unorganized facts. Think about it: how important is your level of education in your career? Many people believe that getting higher education and degrees is a matter of intelligence. Read this book and get rid of this myth! The book is divided into five major parts: 1-Evaluate your actual abilities and define your strategy 2-Reading (how to acquire more information faster) 3-Writing (how to express yourself easier) 4-Remembering (how to retain more) 5-Perform (how to succeed with knowledge tests) "Accelerated Learning" by James Horton is highly recommended to everyone who wants to improve their learning faculties. From my experience as a personal coach I know that many people don't read a lot (of valuable content) because they read slowly and with difficulties. Many people refuse to acquire new skills because it takes too much effort. Most want everything fast and easy. When learning becomes laborious, they give up. Here is a solution. However, learning how to learn needs an effort. There is no magic powder in this book. No audio to listen to while you are asleep. The process will take hard work. Nobody can do this in your place. But in the end, you will be able to control your destiny. Take the first step and get started.

Good book. Very useful!

This book is perfect to teach yourself how to read faster and learn quicker than before. It covers everything that you have never been taught in high school properly.

It was a good read. I'm keen on learning new stuff all the time, but as time goes by I become older so it's getting harder and harder to learn something new. This book helps you to rearrange logically all stuff in your mind. If you have ever thought of speed reading, this book has few gems about it as well.

The book is ok, but it seems as if the author didn't spend time with the editing of the book. There are quite a few typos in it. Also, the author claims there are 6 sections in the book, but there are actually just 5. The book sections are numbered 1-4, then 6. There is no section 5 as stated. The author left gaps in the book that may be important in the long run, or just didn't bother to edit the changes he made in the book. For a book on accelerated learning, you would have expected a more polished well written book.

This was a good one. I wanted to find something to help me with practicing learning a foreign language. This book gave me tips to help with all aspects of learning and memorization. Very informative and helpful

The tips in here works for me. I have been following it. Work your memory. Do something different repeatedly. Learn something new. Follow a brain training program. Work your body. Spend time with your loved ones. Avoid crossword puzzles. Eat right and make sure dark chocolate is included.

The author makes some interesting points, I'll give the book that. What is there might prove useful. It's what's not there that really makes all the difference though. The printed book is 19 chapters of a 24 chapter e-book. Five sections of a six section original book entitled "The 5 Minute Learning Machine". The book references itself by this title. It is meant to have an index it does not have. There are numerous grammatical errors, even in paragraphs in which the author is extolling his method's capacity to give you mastery over reading and writing... The same words in a sentence may be repeated up to three times in a row, as if the author: had stuttered had stuttered had stuttered. Even the line breaks are wrong on many pages, with sentences taking up the first inch of a line then a full new line to continue the same sentence. If it were a complete book, it would get higher marks from me. If it were edited properly, it would get higher marks too. I'll give it 2 stars for maybe having part of what it advertises...
